Sprint 2 Review

Expectations

1. There should be a UI prototype (beyond wireframes).

   Comments: UI looks good. Had implemented login, register, landing pages but not wired to database.

2. Create an end user.

   Comments: The system was able to register an end user.

3. Model and import data from a single source

   Comments: Did not import data into local db

4. Search for a movie and return information about the movie (movie info, a trailer, or ratings)

   Comments: Functionality works well. Implemented using OMDB api

5. The team pushes only branches to origin and uses pull-requests for all merges to master.

   Comments: Has 12 branches and use PR for merging

6. master on origin is protected so (2a) is enforced. Hint: see settings on the team repo.

   Comments: Yes

7. Work is being managed in Jira.

   Comments: Only 4 items in back log. Work well distributed

8. Jenkins runs on all pull-request submissions. It runs the test stage, which has Junit tests and code quality reports. Jenkins catches all failures in the test stage and blocks the merge to master. Jenkins should inform the team of failure either in Slack or email.

   Comments: PR sends email notification. Jenkins runs on PR. Smart commits were not used till now

9. Any stretches achieved

   Comments: Used WT forms for validation while creating user and login. Encryption of password using md5

Grade: A-
